Weapons accountability, chain-of-custody, bar code and RFID tracking and much more in one easy-to-use package

- Creates **weapons receiving form** keyed to unique serial numbers
- Produces **work order form** to track incoming weapons, inspections and repairs
- Prints **weapons tag receipt, repair history and identification tag**
- Tracks weapons locations and produces detailed **chain of custody** reports
- Offers optimal security, peak performance and low cost of ownership
- Uses radio frequency and/or bar code labels to find missing weapons and conduct inventories

ARMS MAKES IMPLEMENTATION EASY!

- Developed using state-of-the-art Java and Open Source software tools, with no third-party software licenses required
- No costly upgrades and maintenance in the future. The database, user interface, tags, electronic forms and workflow are customized around the specific requirements of each customer, providing powerful performance and ease of use.
- Workstations only require Java, and the server software is just 6.0 MB Server software includes:
Java/Linux/Jboss/MySQL/Apache/Tomcat

BULLET-PROOF MANAGEMENT OF WEAPONS, GEAR AND ACCESSORIES

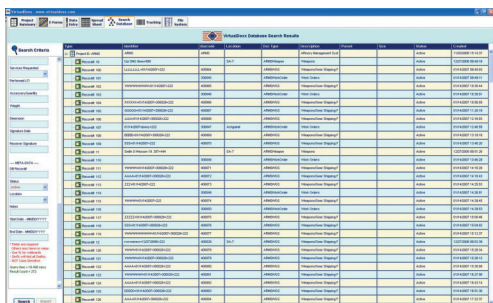

Weapon data entry screen

Weapons & gear shipping screen

Weapons record screen

Weapons search screen

Weapons accountability, chain-of-custody control, plus bar code and RFID tracking

• Easily respond to incoming requests to provide:

- New weapons, gear and accessories to staff in various locales
- Weapon repairs and maintenance, including technical inspections and factory repairs
- Transfer of existing weapons from one location or owner to another
- Destruction of old weapons that are no longer serviceable
- Return of weapons to inventory when staff retire or quit

USE RFID (RADIO FREQUENCY) OR BAR CODE LABELS FOR RAPID INVENTORY AUDITS

- Any weapon within a few feet of an RFID reader will be inventoried and associated with the location from which the inventory is taking place
- Missing weapons' serial numbers can be entered into a portable RFID reader and will "beep" if the reader comes within a few feet of the weapon for which the search is being conducted

CUSTOMIZED LOCATION AND STATUS MENUS MAKE CHAIN-OF-CUSTODY VERIFICATION SIMPLE

- Maintains a complete audit trail detailing a weapon's history from active to retired to destroyed
- Built-in weapon location control screen enables individual or batch processing of weapons being received, assigned or transferred
- Customized queues to monitor weapon locations, inspection, repair cycles and parts usage

AS "TOP SECRET" AS YOU NEED IT TO BE

- User access can be granted at four different security levels
- Data fields can be secured so only Administrators can view sensitive user information (Social Security numbers, etc.)
- Customized reports are available, detailing weapons transferred or repaired by time periods
